Planning - Database

Our Database has two main tables:

User - contains all user login information, including encrypted passwords.

Event - contains all note function. Inlucing type, description, title, rating, and local image link.

Technology Stack

- Java
- Thymeleaf
- Gradle
- MySQL
- Bootstrap

Demo

What I Learned

- Learned about git, and .gitignore preventing headaches.
- Older versions of Java and libraries in gradle, prevent using better methods of image uploading.
- Bootstrap is a framework that can save you time and work on all devices.

What's Next

- Not Using Java 😂
- Adding user comments
- Social Media sharing
- Be able to look up user journals
